## Summary

Master of Computer Science graduate from the University of Sydney (May 2026), with 3 years of Linux kernel and system software development experience. Recently focused on AI Agents: during my internship, I independently developed a news proofreading agent and applied systems engineering experience to agent reliability, scalability, and observability. Strong in backend development, cross-platform adaptation, and rapid prototyping (Vibe Coding), with the ability to efficiently implement proofs of concept and experimental features while shipping complex technical solutions and improving system performance.

## Skills

|                              |                                |
|------------------------------|--------------------------------|
| <b>AI Agent</b>              | LangChain, LangGraph, RAG, MCP |
| <b>Programming</b>           | Python, C, React               |
| <b>Data &amp; Middleware</b> | PostgreSQL, Redis              |
| <b>DevOps &amp; Platform</b> | Git, Docker/K8s, Linux, AWS    |

## Work Experience

### Suzhou Xinsu Newspaper Network Technology Co., Ltd.

Suzhou, Jiangsu, China

SOFTWARE ENGINEER INTERN

Apr. 2026 – May 2026

- Independently developed a news proofreading agent across the editor SDK and backend agent logic, enabling fact retrieval and automated revision suggestions.
- Validated asynchronous task execution, scalability, and interaction observability to improve reliability and deployment controllability.

### Loongson Technology Corporation Limited

Suzhou, Jiangsu, China

SOFTWARE ENGINEER (KERNEL & SYSTEMS)

Dec. 2020 – Aug. 2023

- Upstreamed Linux kernel patches for MIPS/LoongArch, fixing bugs and improving stability/compatibility.
- Led LoongArch ecosystem enablement by porting and validating klibc, Valgrind, and other critical system software on LoongArch64/Linux, covering performance and hundreds of regression tests.
- Maintained team repositories and CI/CD workflows (GitHub), improving build/release reliability and developer efficiency.

### Jiangsu Lemote Tech Co., Ltd

Suzhou, Jiangsu, China

SOFTWARE ENGINEER INTERN (SYSTEMS)

Jun. 2020 – Dec. 2020

- Contributed to Linux kernel development, addressing stability issues through debugging and patching.
- Ported OpenStack Nova and Devstack to Fedora MIPS, enabling deployment and validation on MIPS platforms.

## Projects

### AI News Proofreading Agent

- Designed and developed an embeddable AI proofreading editor SDK with Vue, improving news review efficiency and consistency.
- Built a FastAPI, SQLAlchemy, and LangChain based news agent for local news-base fact retrieval and automated revision suggestions.
- In the testing phase, deployed Qwen locally and used Langfuse to monitor agent interactions, validating controllability and performance metrics.

### Stock Analysis Demo

- Built an A-share stock analysis demo with FastAPI, SQLAlchemy, and PgQueue, making ingestion, analysis, and task execution asynchronous.
- Implemented a YAML-based rule engine and integrated CNInfo and Yahoo Finance data pipelines with retry, rate limiting, and caching mechanisms.
- Implemented an agent interaction workflow based on LangGraph + RAG + SSE, integrated tools through MCP, added Redis/PostgreSQL/Docker/K8s deployment support, and strengthened observability with OTel/Prometheus/Grafana.

### System Software Adaptation and Tooling

- Added LoongArch64 support to Valgrind, including core component porting and key instruction translation, reaching initial usability within one month and passing hundreds of regression tests.
- Adapted and validated Linux kernel, klibc, Kcov, and RT-Thread components on LoongArch, supporting LS2K0300 hardware integration.
- Adapted OpenStack Nova and DevStack deployment for Fedora MIPS, resolving key compatibility blockers and bringing up the core service workflow within one month.
- Designed documentation collaboration CI/CD with real-time PR previews and contributor attribution, improving review efficiency and community collaboration.

## Education

### The University of Sydney

Sydney, NSW, Australia

MASTER OF COMPUTER SCIENCE

Feb. 2024 – May 2026

- Focused on computer networks and distributed systems, including system design and reliability fundamentals.
- Built solid AI foundations covering machine learning fundamentals and practical applications.

### Suzhou University of Technology (formerly Changshu Institute of Technology)

Suzhou, Jiangsu, China

BACHELOR OF COMPUTER SCIENCE AND TECHNOLOGY

Sep. 2016 – Jun. 2020

- Core CS fundamentals: data structures/algorithms, operating systems, computer architecture, and programming fundamentals.
- Hands-on training in web development and low-level/embedded development (Linux/C projects).
